Name: Parasis – Find Your Paradise

Description: My app is going to be about making destination vacation lists. A user will search for a place they are interested in visiting (whether currently or in the future). For example, if a user searches up Paris, they will see what Paris is best known for, popular tourist attractions and restaurants to visit. A user will also bbe able to make more than one list (e.g. A list for a few days trip, or one month during the summer). They will also be able to note/add restaurants or attraction prices (e.g. Pain Chocolat in Boulangerie Utopie – 13 Euro)

Pages: Welcome Page, About Us Page, Search Page, Loading Page, Settings Page

Data Description: I will be storing the cities and countries, pictures of locations (along with their website link if available) like restaurants/museums, hotels and Airbnbs in chosen locations (along with their website link), general weather during certain times of the year, and prices of restaurants, accommodations, and more.
